

SOFTWARE

Track

FIELD TRACKING & ANALYSIS ELEMENT

KEY BENEFITS

- Real-time project performance analysis
- Easily manage change orders
- Collect daily logs and insight
- Expedite the payroll process
- Anytime, anywhere access with mobile tablet application

FEATURES

- Electronic Field Logs
- Built-in Approval Workflow
- Automatic Error Checking
- Digital Dashboards
- E-mail Report Subscriptions
- Tablet Application for Field Workers
- Custom Properties
- User Security
- Electronic Transfer of Payroll, Equipment, and Production Information to Accounting
- And More

Greater control means greater profitability

Profitability depends on your ability to manage, track and analyze active jobs and their resources across your organization. B2W Track allows you to compare original bid numbers to real job costs, so you can better understand and remain in control of real costs every day, not weeks or months later. Using a laptop or tablet, executives, project managers, field engineers and foremen can view, enter and track real-time status information about jobs for reported production quantities, labor hours, equipment hours and material quantities.

The estimate becomes the job

B2W Track's intuitive interface allows you to import estimated jobs from B2W Estimate or Excel files, and translate them into trackable jobs with measurable outcomes. You can also easily manage job change orders to increase project accuracy.

Streamline single-point data entry from anywhere

Whether you are creating a field log from scratch, copying a field log from a previous day, or from B2W's Dispatch module, B2W Track streamlines the data entry process for maximum efficiency. Everything you enter from the field updates the central database used by other modules, so there is no need to enter data again. Daily logs account for production quantities, employee and equipment hours, materials, trucking and subcontractors, as well as miscellaneous expenses, and can be exported directly to your accounting solution. Plus, by adding custom properties and customizing section names and individual field labels, you can smooth the transition from your previous system, and ensure that B2W Track meets your organization's specific needs.

Reports and dashboards put information at your fingertips

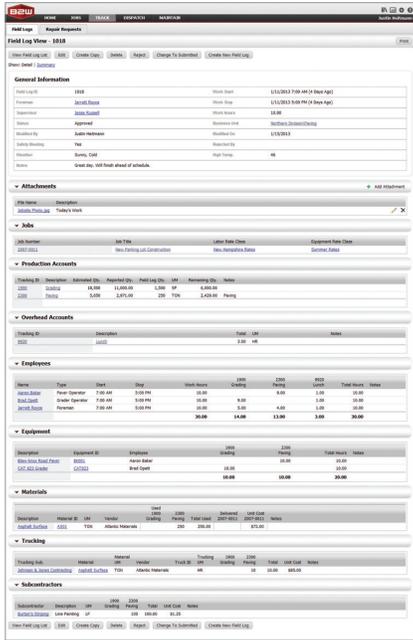

B2W Track's customizable dashboards provide insight into job performance, with drill downs to easily investigate performance trends in greater detail.

SOFTWARE

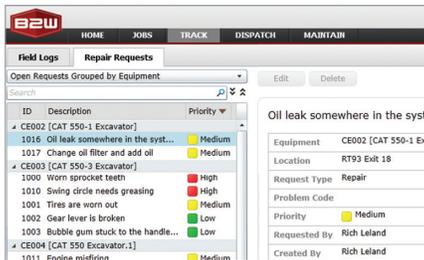

ELECTRONIC FIELD LOGS

Capture daily production, labor and related information from the field, in a customized view.

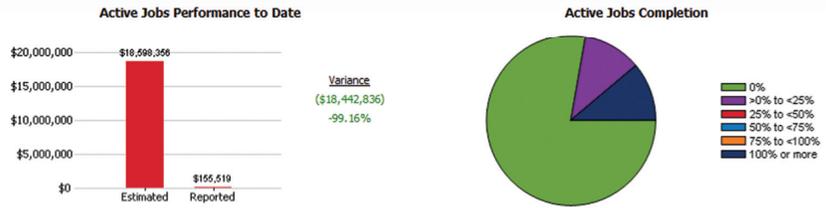

NETWORKED WITH B2W MAINTAIN & DISPATCH

Submit repair requests directly from the field using the Repair Requests tab. B2W Track can also create new field logs using information from B2W Dispatch. You can copy the specific foreman, jobs, employees, equipment, or any combination of these.

And it is easy to keep your decision makers informed—B2W Track can deliver any report, or even a dashboard, to any user on a specified schedule. Reports are customizable too, so you can track the unique Key Performance Indicators (KPI) that are important to your organization.

Enhance mobility with tablet application for field

Designed to provide easy access to critical information necessary to complete work orders and assist in daily tasks, the B2W mobile tablet application provides the ability to:

- Quickly update quantities and hours from the field
- Instantly view real-time status of jobs
- Create and edit field logs on the go
- Review existing field logs and send approval or rejection back to the office
- Use the tablet's built-in camera to capture images of job site issues, accidents or damage and attach to field logs
- Work online or offline for maximum productivity in areas of spotty cellular service

THE B2W SOFTWARE ADVANTAGE

Designed and built on the ONE (Operational Networked Elements) platform, B2W is the first and only suite of construction management solutions that puts everyone in your company—from managers in the office to foremen in the field—on the same page at the same time. Separately or as one unified suite, B2W Estimate (estimating & bidding), B2W Track (field tracking & analysis), B2W Dispatch (resource management & dispatching) and B2W Maintain (equipment maintenance & repair management) offer:

- Increased operational efficiencies and accuracy for more profitable jobs
- One operational database for single point data entry that enables instant cross module resource visibility and collaboration
- Operational control through real-time dashboards with easy drill downs
- Comprehensive integration with all major accounting software packages
- Advanced capabilities between the field and the office via tablet application
- Intuitive user interface for streamlined estimating, bidding, logistics, field operations and maintenance
