

PowerFeeder

MT 3000-2i Offset

Special Class

Material Feeder:

Maximum Conveying Capacity 1,320 tons/h

Pivoting Conveyor

ErgoPlus Operating System

Continuous Rubber Tracks

Highlights of the MT 3000-2i Offset

» **Continuous paving** with a total storage capacity (material feeder and paver) of 39 tons (35 tonnes) and a conveying capacity of 1,320 tons/h (1,200 tonnes/h)

» **Non-contacting material transfer** ensures maximum paving quality

» **Homogenized material** in the receiving hopper of the material feeder from conical augers

» **Wide range of applications** thanks to the pivoting and inclining conveyor

» **Ease of Operation** based on automatic distance control and optional anti-collision protection

» **Excellent visibility** from the convenient and practical ErgoPlus operating system

» **Perfect balance of power** and fuel economy from the powerful Deutz diesel engine delivering 215 hp (160 kW) at 2,000 rpm

» **The undercarriage** with its rubber tracks and high precision drive components provides excellent maneuverability, flotation and traction while enabling paving speeds of up to 250 fpm (76 m/min)

High-Tech for Greater Quality and Cost Efficiency

The VÖGELE MT 3000-2i Offset is a powerful, innovative material feeder whose outstanding feature is an uninterrupted, non-contacting material transfer, guaranteeing the maximum paving quality with the greatest possible cost efficiency.

This is, among others, due to the innovative material conveying concept. With a large receiving hopper, a huge total storage capacity (material feeder and paver) and a peak conveying performance of 1,320 tons/h (1,200 tonnes/h), this VÖGELE PowerFeeder can empty a full truckload in just 60 seconds.

The conveyor of the MT 3000-2i Offset can be pivoted to the left and right, opening up a wide range of possible applications. The ErgoPlus operating concept guarantees simple, reliable handling.

Automatic distance control combined with anti-collision protection ensures that the material transfer runs smoothly. That's why the MT 3000-2i Offset sets the standards for top quality and competitiveness in road construction.

Powerful and Versatile

The PowerFeeder MT 3000-2i Offset comes with a host of innovations. In particular, the pivoting conveyor is a major advantage. It allows the machine to be used in a wide range of applications, enabling high utilization: Pavers can be fed with material from the side, e.g. when paving "hot to hot". Backfilling trenches or filling cavities between safety barriers in motorway construction can be done quickly and easily. Paving on shoulders and other hard-to-reach areas is also made easy.

Working with the PowerFeeder MT 3000-2i Offset is not confined to bituminous mixes alone. The conveying concept has been designed so that other materials such as topsoil, base course material or recycled material can be conveyed in addition to asphalt.

All these possible utilizations make the MT 3000-2i Offset a technically and economically outstanding machine.

Filling cavities between safety barriers

Conventional feeding

Feeding pavers when working "hot to hot"

Feeding from the side

Feeding pavers in an InLine Pave train

Pivoting and Inclining Conveyor for High Versatility

Pivoting 55 degrees to the left or right, the conveyor is a key factor behind the versatility of the MT 3000-2i Offset.

The maximum distance from the outside edge of the material feeder to the center of the discharge point is 11 ft. 6 in. (3.5 m).

The conveyor can also be raised by up to 23 degrees from the horizontal to a discharge height of 12 ft. 9 in. (3.9 m).

Maximum Conveying Capacity for Non-Stop Paving

Non contact continuous material delivery is one of the keys to quality pavement. Consequently, a continuous supply of mix is one of the most decisive quality factors.

The powerful conveying concept of the VÖGELE PowerFeeder MT 3000-2i Offset transfers up to 1,320 tons (1,200 tonnes) of material per hour. That means a 27.5 tons (25 tonnes) truck can be emptied in just 60 seconds. The team of two, comprising material feeder and paver, feature a material storage capacity of 39 tons (35 tonnes), equivalent to almost two complete truckloads. That allows the team to work continuously and ensure maximum pavement evenness at all times, without interruption.

However, it is not just the quality that improves. Continuous paving is also a key requirement if high daily laydown rates of 4,400 tons (4,000 tonnes) and more are to be achieved and major road construction projects are to be completed quicker and more economically.

» **Large receiving hopper** holds more than 15 tons (13.5 tonnes).

» **Specially designed conical augers** in the feeder's hopper ensure optimal homogeneous material flow without residues.

» **3 ft. 7 in. (1.1 m) wide conveyor** capable of transferring up to 1,320 tons (1,200 tonnes) of material per hour.

» **The trough-shaped conveyer belt** centers the material during transfer and provides a clean and uniform flow.

» **Tensioning cylinders guiding the rubber belt** ensure center alignment of the belt. A smart automatic system accurately adjusts the belt tension as required.

» **Innovative diesel heating** keeps the conveyor at a consistent temperature to prevent the material from sticking.

Material Management as a Success Factor

The VÖGELE Material Conveying Concept

Conical augers

The conical shape prevents the formation of "tunnels" in the material and ensures that it is withdrawn evenly from all areas of the receiving hopper. And because fresh hot mix is constantly being fed in from the outside, it is thermally homogenized.

Trough-shaped conveyor belt

The trough-shaped conveyor belt provides a uniform material flow ensuring that the mix quality is maintained in every phase of the material transfer.

Innovative diesel heating

In order to ensure optimum material management, a specially developed diesel heating system with non-contact infra-red panels maintains the correct temperature of the conveyor belt. The path of the material is pre-heated before the transfer of material begins.

Insert material hopper in the paver

In order to optimize the flow of material, the insert hopper for the paver was designed without superfluous corners and edges. Smooth transitions and steep walls prevent the material from accumulating and blocking the flow of mix. The entire quantity of mix is thus continuously fed into the paving process without any of it being able to cool down.

Non-Contact Material Feed Process

The **non-contact transfer of material** is one of the key criteria for high paving quality. Decoupling the feeding from the paving process prevents any jolts from the feed truck from being transmitted to the paver.

A non-contact distance control system ensures the correct space between paver and material feeder. Three laser sensors permanently measure the space between the two machines so that the control system can automatically adjust the speed of the material feeder to that of the paver.

The system also automatically prevents the paver from colliding with the feeder. If the material feeder has to stop unexpectedly, the paver also stops automatically as soon as the distance between the two machines falls below the set minimum.

The distance control system of the MT 3000-2i Offset utilizes three single laser sensors to measure the distance between the paver and the material feeder at three different locations. Should one or even two sensors get obstructed, the remaining sensor(s) continue to perform the function.

The ErgoPlus Operating Concept

The ErgoPlus operating system comprises a well organized operator platform, a console for intuitive feeder operation and ergonomic driver seats. This design puts the machine operator at the heart of things, guaranteeing comfort, safety and excellent visibility at all times.

The centerpiece is the feeder operator's console. All the controls required for main and frequent functions are arranged in logical groups. Operation is intuitive and easy to learn. In fact, for the majority of applications only one person is needed to operate the material feeder.

The Operator's ErgoPlus Console

Full Control for the Machine Operator >>

The Operator's ErgoPlus Console

The feeder operator's console has been designed with user convenience and a clear overview in mind, with all functions arranged in logical groups for rapid access. Once a button is pressed, a function starts directly. This is due to the "Touch and Work" principle.

As darkness falls, the feeder operator's console is back-lit automatically, which makes night-time work easy and relaxed. On the ErgoPlus console, all push-buttons are clearly identifiable by touch even when wearing work gloves.

- **Module 1:** Traction
- **Module 2:** Material Conveyance
- **Module 3:** Receiving Hopper and Steering
- **Module 4:** Display for set-up of vital feeder functions on menu level 1. Secondary functions on menu level 2.

1 Automatic distance control (option)

Automatic distance control adapts the material feeder's speed automatically to the paver's speed. As a result, a constant distance between the paver and the feeder is maintained at all times. The feeder operator can concentrate exclusively on the transfer of material. The laser-based distance control system allows two different distances to be stored.

2 Choice of operating modes

On the ErgoPlus console, 4 different operating modes for the feeder are available to select from. By pressing the arrow buttons, up or down, the operator changes modes in the following order: "Neutral", "Job Site Mode", "Positioning Mode" and "Material Transfer". An LED indicates the mode selected.

3 Automatic conveyance of mix

When pushing the "Material Transfer" button, all conveying systems are activated in automatic mode. The speeds of the transverse augers and the conveyor belts are optimally matched to one another. A sonic sensor monitors the quantity of material conveyed and automatically adapts the feed rate as required.

4 Repositioning at the press of a button

The simple press of a button is all that's needed for the machine to turn almost on the spot, requiring just a minimum of space. Mounted on tracks, the VÖGELE PowerFeeders boast an extremely small turning circle. This is a great advantage in confined spaces in particular, and allows quick and safe repositioning of the machine from one work section of the job site to another.

5 Display panel of the feeder operator's console

The large, easy-to-read display panel shows vital information on menu level 1 such as the current operating speed and the level of mix in the paver's material hopper. Further parameters such as the feed rate and the distance from the paver can be easily set on the display panel. And the display gives access to machine-related information such as fuel consumption or service hours.

6 Steering with preselected steering angle

For long curves with a constant radius, the desired track position can be preselected using arrow keys. As long as the function is not deactivated, the material feeder automatically follows the curve without a need for operator intervention.

7 Choice of engine speed ranges

For the engine, there is a choice of 3 modes to select from: MIN, ECO and MAX. To switch modes for engine rpm, all the operator needs to do is press the arrow buttons, up or down. In ECO mode, the engine delivers sufficient power for a great number of applications. Operating in ECO mode reduces noise emission and fuel consumption considerably.

Ergonomics you can grasp

A joystick is used to pivot the proportionally controlled conveyor with the utmost precision and sensitivity through a maximum of 55° in both directions and to tilt it by up to 23°. Such high-precision maneuverability has many advantages.

These advantages include the safe and effortless feeding of pavers from the side, backfilling trenches or the cavities in safety barriers during motorway construction, as well as reconstruction measures on hard shoulders.

» The pivoting conveyor is controlled via a joystick in the armrest of the operator's seat. The joystick is used to control with absolute accuracy the conveyor's pivoting movement to the left or right, its raising or lowering as well as the conveying capacity.

» To raise or lower the conveyor, the operator pulls the joystick towards him or pushes it away from him. To move it laterally, he tilts the joystick to the left or right.

» The Emergency Off button stops the material transfer process immediately should a problem occur.

Pressing on the white button increases the conveyor speed to the maximum, enabling a 27.5 tons (25 tonnes) feed truck to be completely emptied in just 60 seconds.

The ErgoPlus Operator's Stand

Excellent All-Round Visibility

The comfortable operator's stand gives an unobstructed view of all crucial areas on the feeder such as receiving hopper, steering guide or dumping point from the conveyor. This way, the material feeder can easily be operated by one person.

Two Operator Seats

In complex feeding tasks operation of the pivoting conveyor can be taken over by a second operator. The arrangement of the pivot-mounted seats provides for maximum all-round visibility. It allows the operators to conveniently monitor the mix supply from the feed trucks on the one hand and the dumping point from the conveyor on the other.

Working Comfort

A few adjustments are all it takes for the feeder operator to position his console exactly to meet his personal needs. It can be displaced across the full width of the operator's stand, swivelled out to the sides and tilted. This allows an ergonomically optimized workplace to be set up in no time at all.

Weatherproof Hardtop

The modern hardtop made of glass fibre reinforced polymer material shelters the operator whether rain or shine. It can be lowered effortlessly to the transport position by means of a manually operated hydraulic pump. Wide, easily extendable sunshades give the operator optimal protection even when his seat is moved out.

Clear Structure

The operator's stand with its streamlined design is well organized, offering the feeder operator a professional workplace.

The operator's console can be protected by a shatter-proof cover to prevent wilful damage.

Plenty of storage space makes it easy to keep the machine tidy.

Access to All Vital Service Points

Access to all vital service points on the machine has been designed to be extremely clear and ergonomic.

All hydraulic pumps are located on the splitter gearbox and provide maximum service-friendliness thanks to their clear arrangement and easy accessibility.

Service indicators and easily accessible measuring ports facilitate diagnosis and service.

Powerful Drive Technology

The MT 3000-2i Offset is driven by a powerful Deutz diesel engine rated at 215 hp (160 kW). The "i" stands for "Intelligent Emission Control" and is found in the type names of all machines from the WIRTGEN GROUP equipped with the latest engine technology.

With these engines, power, economy and environmental protection are not mutually exclusive.

- » **Powerful Deutz diesel engine** with an output of 215 hp (160 kW) at 2,000 rpm.
- » **The large fuel tank** holds 119 gal. (US) (450 liters) for more than a day's work without a need for refueling.
- » **Low average fuel consumption** of 3 gal. (US)/h* (12 liters/h*).
- » **An ECO mode** (201 hp at 1,800 rpm / 150 kW at 1,800 rpm) cuts operating costs and allows particularly quiet operation.

- » **An electrical package** is available for the MT 3000-2i Offset. It comprises a 230 V power outlet, heating rods for the scrapers of the conveyor belts, two power outlets for light balloons as well as a three-phase A.C. generator for power supply.

*The indicated consumption is based on an average daily laydown rate of 2,650 tons (2,400 tonnes) and may vary according to job site conditions.

An optimally designed cooling system comprising a large cooler assembly and a separately mounted hydraulic oil cooler provides excellent cooling, even during full-load operation.

Mobile in Every Way

A strong point of the VÖGELE PowerFeeder MT 3000-2i Offset are the continuous rubber tracks. Due to the large track width of 18 in. (457 mm), paving speeds up to 250 fpm (76 m/min) are possible. The large footprint also provides excellent flotation and tractive effort.

The powerful, separate drives are integrated directly into the drive wheel of the rubber track, meaning that engine output is transmitted without any loss of power. As a result, the PowerFeeder can push any feed truck with ease.

The PowerFeeder MT 3000-2i Offset also displays impressive maneuverability and high mobility. It can turn almost on the spot and easily masters difficult terrain with inclines and slopes.

Continuous rubber tracks, 18 in. (457 mm) wide, with self-aligning front idlers provide for optimal steering under any conditions. Dual track tensioning cylinders provide perfect alignment.

Easy Transport

Transporting a material feeder is a cost factor that should not be underestimated. The VÖGELE PowerFeeder was designed from scratch for optimum transport, and that has a positive impact on costs.

Due to the machine's low weight of less than 57,100 lbs. (25.9 tonnes), the machine is not too heavy for most roads, tunnels and bridges, and can reach its destination without special permits or time-consuming detours.

The transport height of 10 ft. 2 in. (3.1 m), the transport width of 9 ft. 10 in. (3 m) and the outer track gauge of 8 ft. 9 in. (2.66 m) are dimensioned so that the MT 3000-2i Offset can easily be transported on a conventional low-bed trailer.

With a height of 10 ft. 2 in. (3.1 m), the VÖGELE PowerFeeder can easily be transported on a conventional low-bed trailer.

VÖGELE Material Feeders Make Job Sites Safe

A construction machine is only truly excellent if it meets all occupational safety and health requirements. At VÖGELE, safety and accident prevention issues are given the highest priority in product development. As a result, we create machines that are designed to be operator-friendly. The design of the Human Machine Interface, i.e. the display and operating elements, is a key aspect for us.

However complex the processes in the supporting architecture of a VÖGELE PowerFeeder are, they should always be simple, reliable and intuitive for the operator. This is the only way to ensure the correct, fail-safe operation of the machine.

Each ergonomically optimized detail of the VÖGELE PowerFeeder makes it easier for the operator to manage the machine. The design of the operator platform is uncluttered and clearly laid out. The two seats and the operating console can be adjusted and swiveled separately. The joysticks in the armrests of the seats permit intuitive control of the conveyor. The hardtop is fitted with shades to protect against rain and direct sunlight. The automatic distance control and material level sensor ensure that the operator can concentrate and focus on the real tasks at hand, i.e. the material transfer process, the job site and the areas surrounding the PowerFeeder. And concentration is the best safety measure there is.

An overview of the essential safety features of the VÖGELE PowerFeeder MT 3000-2i Offset

- » Safe and convenient access to the operator's workstation.
- » Intuitive operation thanks to the ErgoPlus operating system.
- » The operator's stand is clearly laid out and offers excellent visibility of all areas.
- » Precision control of the pivoting conveyor via a joystick, with an additional lock to prevent the pivoting conveyor from being moved accidentally.
- » The additional seat allows crews to take up their individual working positions quickly.
- » The automatic distance control and automatic material level sensor make life much easier for the operator, leaving him free to concentrate fully on the feed truck and transfer of the material.
- » All maintenance points are accessible from ground level or at the level of the operator's stand without needing a ladder and are accessed directly through large hinged panels.

All the Facts at a Glance

POWER UNIT

MT 3000-2i Offset (for EU/EFTA countries / USA / Canada / Japan)
Engine: 6-cylinder diesel engine, liquid-cooled
Manufacturer: Deutz
Type: TCD 6.1 L6
Exhaust Emissions Standard: US EPA Tier 4i
Output: Nominal: 215 hp (160 kW) at 2,000 rpm (according to DIN)
ECO mode: 201 hp (150 kW) at 1,800 rpm
Fuel Tank: 117 gal. (US) (450 litres)

UNDERCARRIAGE

Crawler Tracks: continuous rubber band
Ground Contact: 9 ft. 10 in. x 18 in. (2,992 mm x 457 mm)
Traction Drive: separate hydraulic drive and electronic control provided for each crawler track
Speeds: Operating: up to 250 fpm (76 m/min.), infinitely variable
Travel: up to 4.7 mph (7.5 km/h), infinitely variable
Steering: by alteration of track running speeds
Brake: multiple-disk brake locked on automatically without oil pressure

MATERIAL CONVEYING SYSTEMS

Augers:	2, driven hydraulically, installed in the receiving hopper
	Speed: infinitely variable
	Diameter: 16 in. (400 mm)
Conveyors:	2, driven hydraulically, pivoting conveyor can be turned through 55° left or right, distance from outer edge of feeder to dumping point 11 ft. 6 in. (3,500 mm)
	Transfer Height: 12 ft. 9 in. (3,900 mm) (max)
	Belt Width: 3 ft. 7 in. (1,100 mm)
Conveying Capacity:	1,320 tons/h (1,200 tonnes/h)* (max)

RECEIVING HOPPER

Holding Capacity:	15 tons (13.5 tonnes)
Width:	12 ft. 1 in. (3,680 mm) (hopper wings extended)
Dump Height:	2 ft. (600 mm) (bottom of receiving hopper)

*dependent on type of mix

INSERT MATERIAL HOPPER

Holding Capacity:	up to 21 tons (19 tonnes)
	(to be placed into the material hopper of the paver)

DIMENSIONS (TRANSPORT) AND WEIGHT

Length:	48 ft. 7 in. (14,820 mm)
Width:	9 ft. 10 in. (3,000 mm)
Height:	10 ft. 2 in. (3,100 mm)
Weight:	57,100 lbs. (25.9 tonnes)
