

GRAB IT... HOLD IT... LIFT IT...

With the Multi-Grapple Lifter

Caldwell
OUR INNOVATION WILL MOVE YOU

Multi-Grapple

Lifting System

The Multi-Grapple's three arms are designed to lift wood, rock & stone, metal shavings & scrap and provide a stable lift of irregularly shaped heavy debris.

The 3-point design provides for a quick, secure lift that creates a safe and easy way to move large objects using a single operator. The Multi-Grapple arms automatically and securely grab on to irregular shapes and grips for the lift. Once the object has been placed the Multi-Grapple's center mounted actuator automatically locks open the grapple arms for the next lift providing for quicker load cycles. The operator has complete load control from load grip to load release.

The Multi-Grapple is the perfect solution for hard to reach loads in ravines and ditches. With its load grabbing versatility the Multi-Grapple quickly turns a difficult project into a quick, safe and easy lift and load solution. Multi-Grapple can be used with any of your on-site moving equipment with the proper rated lifting capacity.

Caldwell's Multi-Grapple is available in standard models with capacities from 3,000 to 12,000 pounds. Custom models are available to meet your unique lifting requirements.

Features:

- 3-point design.
- Automatic latching.
- Lifts irregular shaped objects or debris.
- Quick load cycles.
- Custom designed grapple arms are available to meet your needs.
- Meets ASME B30.20 and BTH-1 standards.
